

Anthony Ibarra
Electrical Engineer

(Local to Chicago, IL; Available to Start Onsite)

(773)-387-8485 | 28aibarra@gmail.com | [LinkedIn](#) | <https://aibarr23.github.io/Portfolio/#portfolio>

Professional Summary:

Electrical and Computer Engineering graduate looking for the opportunity to become a professional in my respective field. Showcasing a strong focus in Embedded Systems, Control system theory, Robotics and Automation. With fundamental understanding of pattern recognition, Signal processing, and power electronics making me a flexible Embedded & Control Systems Engineer. Possessing various knowledge in different fields providing fast adaptable capability within the work environment of a multidisciplinary team. With the eagerness to learn on and off the job, demonstrating reliability and trustworthiness for a great addition toward a multidisciplined team.

Education:

University of Illinois Chicago (UIC)

Jan 2023 - May 2025

Master of Science in Electrical and Computer Engineering Chicago, United States

Relevant Coursework:

- Audio & Acoustic Signal Processing, Filter Synthesis, Adaptive Digital Filters, Electromechanical Energy Conversion
- Linear Systems Theory & Design, Electromagnetic Compatibility, Advanced Computer Communication
- Convex Optimization, Mechatronics Embedded Design, Neural Networks

University of Illinois Chicago (UIC)

Aug 2017 - May 2022

Bachelor of Science in Computer Engineering Chicago, United States

Relevant Coursework:

- Artificial Intelligence, Principles of Modern Control, Principles of Auto Control, Pattern Recognition
- Computer Comm Networks, Robotics: Algorithm/Control, Embedded Systems

Certifications:

- Creating and Securing Bluetooth Low Energy (BLE) Application - LinkedIn Learning
- Advanced 5G NR (New Radio) Technologies - LinkedIn Learning
- Satellite Internet and Communications: Fundamentals - LinkedIn Learning
- C Programming for Embedded Applications - LinkedIn Learning
- Learning LabVIEW - LinkedIn Learning
- Data Acquisition with LabVIEW - LinkedIn Learning
- Robot Framework Test Automation: Level 1 (Selenium) - LinkedIn Learning

Skills:

- Altium, ANSYS HFSS, LT Spice, PCB, soldering, SolidWorks
- HIL, MATLAB, Simulink, Quartus, Icarus Verilog
- Raspberry PI, Arduino IDE, assembly language,
- C, C++, Python, Bash, FPGA Verilog, VHDL
- BLE, UDP, TCP/IP, I2C, UART, SPI, Ethernet, RF, LTE
- Wireshark, Ignition, Rockwell, PLC, Robotics, ROS2, SCADA, HMI, drivers,
- Git, GitHub, Docker, IEEE, OOP, IoT, Ubuntu, MySQL
- Latex, Microsoft PowerPoint Microsoft Word,
- Visual Studio Code, VNC

Professional Experience:

University of Illinois Chicago (UIC) Chicago, United States

Jan 2025 – May 2025

Research Project, Acoustic & Audio Signal Processing

- Implement a solution for motorcycle riders with some degree of hearing impairment.
- The starting goal is to remove the dampening from the helmet, providing clear sound while wearing the helmet without adding any unneeded noise or unwanted sounds.
- In turn this can potentially amplify user awareness while riding or in largely populated areas. Report being in the scope and style of a Signal Processing Society conference paper.
- Develop a new method or solution with concepts to be applied to an existing problem.
- Perform real world testing and validation of project and research implementation.
- Test and use skills and algorithms from acoustic & audio signal processing to achieve the set goal

University of Illinois Chicago (UIC) Chicago, United States

Jan 2024 - May 2024

Series Brushed DC motor modeling | Electromechanical Energy Conversion

- Implement a behavior model of a DC motor using knowledge magnetic circuits and transformers; DC machines; and three-phase AC synchronous and induction machines
- DM – 100A DC Machine 0.3 kW (0.4 hp), 125 V, 2.4 A, and 1800 RPM; motor testing and verification, working with motors of up to 120v using 0 – 125 volt variable and 0 – 150 volt DC voltmeter /ammeters
- AC 120VA 60Hz transformer testing through AC measurements using wattmeters, voltage meters, and ammeters
- LTSpice design and simulation of DC motor mechanical behavior through electrical simulation

University of Illinois Chicago (UIC) Chicago, United States

Jan 2024 - May 2024

Optimization on Three Coil Long Range (WPT)

- Electromagnetic Compatibility testing using a spectrum analyzer, Oscilloscopes for EMC and EMI testing for PCB and signal integrity using RF SMA coaxial cables, SMA terminators
- Create a three-coil configuration for long range wireless power transfer for simulation, confirming data from research papers through simulations
- Mathematically simulated plot from MATLAB regarding the Three coils as shown within the research paper
- Simulation and plot from Ansys HFSS 3D EM simulation software, simulating the three-coil behavior in different configurations
- Make an IEEE formatted report using Latex, in a professionally typeset manner demonstrating discoveries and results

University of Illinois Chicago (UIC) Chicago, United States

Jan 2023 - May 2023

Self-Driving Car, Mechatronics Embedded Design

- Lead the team and manage all time constraint tasks, development and design tasks, make timely decisions for the team's success in completing the product and hardware development
- Design a motor driver circuit through FET Driver implementation, either of (single fet, half bridge, or full H-bridge), controlled via a PWM input signal from the microcontroller
- Design a Boost Converter for the implementation multiple power systems
- Product testing using Oscilloscope, multimeters, benchtop powersupplies; and Soldering fixes when necessary
- Develop and tune PID controllers for both the steering and velocity controls (Servo motor, DC motor) respectively
- Design, develop the PCB through Altium Designer and get it manufactured, providing all necessary files such as BOM, gerber files, etc.
- Solder all through hole and SMT components including masking for PCB and Prototype; create any needed jumper wires for connections through crimping and soldering
- Prototype implementation of a perf board circuit, also used as an emergency backup board for PCB failure ensuring continuation of product development
- Implement Sensors and Encoders a filter for the line Camera or velocity measured input through embedded software development and test through debugging microcontroller software

University of Illinois Chicago (UIC) Chicago, United States

Aug 2021 - May 2022

Senior Design Product Development

- Work in a four-student team to prototype a product implementing a automated watering systems plants by taking moisture levels, outdoor weather conditions, and plant information data into account
- Manage team through verbal and written communication to make sure all assignments and goals are completed on time, and submit weekly reports based on progress of project development
- Embedded programming for a Arduino Nano iot 33 to consider watering decisions per plants moisture levels and water consumption
- Create mobile APP (Kivy framework) to display necessary information regarding the system, plants moisture levels and weather conditions
- Create a UDP client-server connection for communication between powered product and the mobile application; providing manual control over a wireless connection
- Implement wireless communication through Bluetooth Protocol (BLE) for consumer and their device

Languages:

- Spanish (B-1) English (Advanced)
